

BloombergNEF Tier 1 Power Inverters, 3Q 2026

BloombergNEF has developed a tiering system for solar and battery storage inverter products, based on bankability, to create a transparent differentiation between the multiple manufacturers of power inverters on the market. The basic tiering categorization should never replace a proper due diligence process in product selection.

1. Why divide the inverter market into tiers?

BloombergNEF is frequently requested by clients for a list of 'major' or 'bankable' suppliers – in common industry parlance, tier 1 suppliers – for use in manufacturing forecasts, preliminary competitor analysis, and other internal comparisons. It is very common for industry players to refer to 'tier 1' players, but these terms are seldom defined or described, which is unhelpful for firms outside the solar and battery storage industry trying to get a basic overview.

We strongly recommend that inverter purchasers and banks do not use this list as a measure of quality. Purchasers can consult technical due diligence firms such as TÜV Rheinland, STS Certified, Bureau Veritas, SGS, UL Solutions, Intertek ETL, RETC LLC, Clean Energy Associates, PI Berlin and Pvbuyer. These would usually consider what factory the inverter comes from, conduct fault and availability tests on a sample and give an informed opinion on whether the inverters will perform as expected.

2. Definitions

'Bankability' – whether projects using the solar or battery storage products are likely to be offered non-recourse debt financing by banks – is the key criterion for tiering. Banks, and their technical due diligence providers, are extremely unwilling to disclose their whitelists of acceptable products. BloombergNEF therefore bases its criteria on deals that have been closed in the past, as tracked by our database.

We only tier manufacturers which actually own production facilities and sell under their own brands. Companies which outsource production under brand names are not tiered.

3. Inverter Tier 1

Tier 1 inverter manufacturers are those that have provided own-brand, own-manufactured products to at least **four** different solar, battery storage or hybrid projects over 5MW+ of installed capacity, all financed non-recourse, by at least **two** different commercial (i.e. not development, not export-import) banks in the past two years. The earlier of financing or commissioning date counts for tiering, i.e. refinancings of old projects do not count.

Tiering Methodology

The full methodology can be read here in [English](#) and [Chinese](#). Inverter makers that want us to tier them accurately can send us data using the template on this [link](#) for solar projects and on this [link](#) for battery storage projects.

Table 1 shows inverter makers that meet our criteria as of 3Q 2026.

Table 1: Power inverter manufacturers meeting BloombergNEF's Tier 1 criteria as of 3Q 2026

Firm/Brand	2025 total disclosed power inverter production, MW
Yaskawa	Not disclosed
TMEIC	Not disclosed
Tesla	Not disclosed
TBEA	40,600
Sungrow	140,000
SMA	19,900
Sinexcel	Not disclosed
Sineng	38,437
Power Electronics	Not disclosed
NR Electric	Not disclosed
Ingeteam	4,499
Huawei	185,000
Hopewind	5,323
Hitachi	Not disclosed
Goodwe	29,000
Ginlong-Solis	24,047
GE Vernova	8,606
EPC Power	4,250
Envision Energy	Not disclosed
Delta Electronics	4,200
CLOU	612
Chint Power/CPS	8,839
ABB	Not disclosed

Source: BloombergNEF. Note: Methodology [here](#). List is in reverse alphabetical order. "Power inverter production" refers to solar inverters and battery inverters/power conversion systems (PCS), where disclosed and applicable. In some cases, reported production may relate only to solar inverters or only to battery inverters/PCS, depending on company disclosures and product scope. Companies can access the finance deals in BNEF's asset finance database ([link](#)) and download the solar dataset of financings [here](#).

CRRC Times Electric has been dropped from the list as they no longer meet our criteria regarding number of eligible projects and banks within the last two years.

Yaskawa and Delta Electronics have been added to the list for the first time.

From 2Q 2026, BNEF began tracking solar inverter production and battery storage inverter production separately where data is available. BNEF expects coverage of reported production volumes to improve over time. Please contact BNEF if you would like to provide further information regarding production volumes or disclosures.

There are no companies that only supply module-level power electronics like microinverters and optimizers on this list as we do not track projects under 5MW of capacity. This is not a reflection

of the quality of microinverters, merely that they are generally not used in large solar projects, so banks are unlikely to have conducted due diligence on them.
